PROFESSIONAL SUMMARY

Results-driven Backend Engineer with 1+ year of professional experience building scalable services, RESTful APIs, and microservices architectures. Proven track record in cloud-native development on Azure, event-driven systems with Apache Kafka, and NoSQL/relational databases. Skilled in system security (OAuth 2.0, JWT), CI/CD pipelines, and automated testing — directly aligned with the core requirements of this role at micro1.

TECHNICAL SKILLS

Backend & APIs:	Spring Boot, ASP.NET, RESTful APIs, Microservices, Kafka (event-driven)
Languages:	Java, Python, C#, JavaScript
Databases:	MongoDB (NoSQL), PostgreSQL, MySQL (relational), Redis (caching)
Cloud & DevOps:	Azure, Docker, CI/CD pipelines, Databricks, Linux
Security:	OAuth 2.0 (Google), JWT, Spring Security, Ethical Hacking Essentials
Testing & QA:	JUnit, NUnit, XUnit, Selenium, SonarQube, Swagger/Postman
Data & ML:	PySpark, Spark SQL, scikit-learn, TensorFlow, Pandas
Fundamentals:	DSA, DBMS, OOP, OS, Computer Networks, Cybersecurity

PROFESSIONAL EXPERIENCE

Specialist Programmer — Infosys

June 2025 – Present

Pune, India (Remote-Hybrid)

- Designed and maintained Databricks Spark SQL data pipelines, building datamarts and catalog blocks from client business requirements — translating specs into clean, optimized backend solutions.
- Engineered reusable asset bundles with explicit schema definitions and dependency management, improving service modularity and maintainability across data microservices.
- Implemented multi-table join logic, aliasing, and data matching rules in PySpark; ensured backend data reliability through automated quality checks covering nulls, duplicates, and constraint violations.
- Collaborated cross-functionally with stakeholders to convert business needs into technical specifications on Azure cloud, leveraging Kafka for event-driven pipelines and Redis for caching layers.

Tech Stack: *Python, PySpark, Spark SQL, Databricks, Azure, MongoDB, Kafka, Redis, Linux*

SDE Intern — Skepsi.ai

June 2024 – Sep 2024

Remote

- Designed and automated 300+ backend test cases across 6 hospitality clients achieving a 98% pass rate, directly improving production reliability and reducing post-release defect rates by 10%.
- Built OCR-based data extraction pipeline for government ID verification, increasing user verification accuracy by 95% — a backend service with direct security and auth impact.
- Participated actively in code reviews and mentoring sessions; contributed quality improvements reducing post-release bugs by 10% via SonarQube-driven refactoring and best-practice enforcement.
- Developed and maintained RESTful API integrations on Azure using ASP.NET and C#, with comprehensive NUnit/XUnit test coverage and CI/CD deployment workflows.

Tech Stack: *C#, ASP.NET, NUnit, XUnit, MySQL, Azure, Selenium*

KEY PROJECTS

Meeting-to-Action Copilot — AI-Powered Backend Service

May 2026 – Present

- Built an AI-powered meeting assistant backend that transforms meeting transcripts into actionable tasks, summaries, and follow-up items via RESTful APIs — directly applicable to micro1's backend service requirements.

- Designed and implemented scalable Spring Boot REST APIs for transcript processing and action-item generation, following modular microservices architecture principles for maintainability and extensibility.
- Containerized all application services with Docker for consistent, reproducible deployments across environments; integrated SonarQube quality gates and automated code analysis into the CI/CD pipeline.
- Developed a React.js frontend for meeting management and task tracking, enabling full-stack ownership of a production-grade application from architecture to deployment.

Tech Stack: *Spring Boot, React.js, Docker, SonarQube, REST APIs*

Journal App — Scalable Backend with Event-Driven Architecture

Sep 2024 – Dec 2024

- Architected modular RESTful API backend using Spring Boot and MongoDB, with Redis caching achieving a 60% performance improvement and MongoDB indexing for optimal query throughput.
- Implemented secure OAuth 2.0 authentication (Google) and JWT-based authorization — demonstrating deep understanding of authentication/authorization best practices required for production systems.
- Integrated Apache Kafka for real-time event streaming, enabling an event-driven microservices pattern; documented all APIs with Swagger and deployed via CI/CD pipelines.
- Maintained code quality with JUnit test coverage and SonarQube static analysis, following clean code and thorough testing standards.

Tech Stack: *Spring Boot, MongoDB, Redis, Apache Kafka, Spring Security (OAuth 2.0), JUnit, Swagger, Docker, SonarQube*

Movie Recommender System — ML-backed API

Aug 2023 – Sep 2023

- Developed a content-based recommendation engine exposed through an interactive Streamlit web interface, applying Scikit-Learn model training and Pandas data processing pipelines.

Tech Stack: *Python, Streamlit, Pandas, Scikit-Learn, Kaggle*

EDUCATION

B.Tech. in Information Technology — IIIT Vadodara

Dec 2021 – May 2025

CGPA: 7.86/10 | Relevant Coursework: Data Structures & Algorithms, DBMS, OOP, Operating Systems, Computer Networks, Cybersecurity

CERTIFICATIONS

-
- Ethical Hacking Essentials (EHE) — EC-Council (Feb 2024)
 - Cyber Security Analyst Job Simulation — Forage (Feb 2024)

ACHIEVEMENTS & LEADERSHIP

-
- Global Rank 85 / 29,332 participants — CodeChef Starter 176 (top 0.3%).
 - Top 3.5% of 85,000 applicants — Amazon Machine Learning Summer School 2023 & 2024.
 - Top Open Source Contributor — Social Winter of Code (SWOC) 2024.
 - College Bus App Prototype selected for SSIP Phase 2 — top 10% of all college submissions.
 - Mentored 250+ students through Google Arcade program on Cloud Computing and ML — demonstrating technical leadership and knowledge-sharing culture aligned with micro1's mentoring requirements.
